SITE ANALYSIS

The site is served by three subway lines running vertically through the center and left and right, with two stations on the south side.

There is a lot of car traffic on Canal St, Howard St, and Center St.

On the other hand, Broadway Str and Grand St have less traffic.

How to live in NY? How to live in SoHo?

CONCEPT

Healthy and Green

with sport activities, streetside green, small green, cast iron buildings

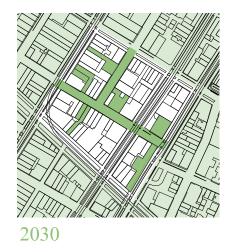

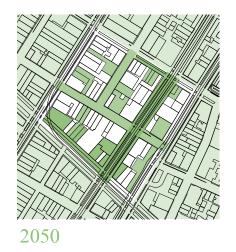

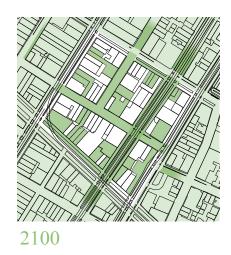

Traffic on Howard St, Lafayette St, and Crosby St will be phased in to limit traffic to cabs and public transportation only, reducing the number of cars coming and going. Increase the greenery along the streets to make it a space for bicycles and people to stay. By increasing the number of houses along the road, we will create a comfortable living environment that is integrated with the greenery.

VISION

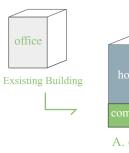

MASTER PLAN

TYPE OF BUILDING

A. change of use

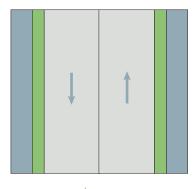

housing office commercial

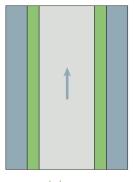

B. addition to a building

TYPE OF STREET

activity street

IMAGE

Residents can stay on this path or do some light exercise. It is a lively space where you can hear the sounds of people's activities and conversations.

Looking around, I see historical buildings. It is a peaceful space surrounded by greenery.

The streets are less crowded with cars and more with bicycles, pedestrians, and greenery.
This is a space where you can feel the movement of people.

This is the green space on the south side of the site, on the Canal Street side. People gather in this bright space.

The sports facility on the rooftop mixes private and public spaces. In NYC, where sports are very popular, young people gather here.

A small park created by demolishing low-rise houses is a common way to create a park in NYC. It is a quiet space surrounded by high-rise houses.
